

TASK and Deliverables	YEAR1												YEAR2												YEAR3											
	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3	4	5	6	7	8	9	10	11	12
<b>WP1: Climate change and IWW</b>																																				
Definition of the area of study																																				
Scenario construction																																				
Climate change scenarios																																				
Climate change effects on hydrology																																				
Climate change effects on navigation																																				
Consolidation of results																																				
<b>WP2: adaptation strategies</b>																																				
Possible adaptation strategies																																				
Assessment of adaptation strategies																																				
<b>WP3: effect on transport network</b>																																				
Calibration of the model																																				
Reference scenario																																				
Scenarios including adaptation																																				
<b>WP4: Cost effectiveness analysis</b>																																				
Literature review																																				
Cost-effectiveness of adaptation																																				
<b>WP5: Development plan for IWT</b>																																				
Long-term vision and IWT-development plan																																				
<b>WP6: Dissemination of results</b>																																				
Dissemination
